Besides upscaling the existing workforce, you might need to hire experts and proficient team members who can guide you on a digital transformation plan. Also, such resources will inculcate a tech-savvy mindset among your employees simultaneously.

## Realize the Scope of Technology

### Technologies are much beyond their typical use cases.

Is AI only to create chatbots? Or, can IoT produce "talking" smart devices only? Hell no! The scope of such technologies extends much beyond the typical Applications. Understanding the utility of such technologies in your company remains the most crucial responsibility for the executives.

Your team might uplift an all-new department using a particular technology that no one had imagined. So, understand the actual scope of technology in your environment and remain open to innovative applications every time.

### Focus on what's readily available to begin.
